Access to the HSDL Collection and the News Digest Collection

Most Homeland Security Digital Library (HSDL) resources are not openly available to the public at large. Full access to the HSDL Collection and the News Digest Collection is available to homeland security officials and academics for research, analysis, and policy and strategy development. Access is offered to U.S. citizens who are:

- federal, state, tribal, and local U.S. government officials;
- members of the U.S. military;
- homeland security researchers and academics;
- or security staff protecting organizations vital to U.S. infrastructure.

There are two options for getting full access to the HSDL Collection and the News Digest Collection. You may want to utilize both.

An individual account is a password-protected account, specific to you, that you can use anywhere, any time. With an individual account, you can take advantage of special and personalized features such as Email Alerts and My Lists, both are ways to access and organize information according to your requirements. An individual account is required for those who request access the Restricted Collection. Request an individual account now (link will take you to the NPS Center for Homeland Defense and Security website).

Organization-wide access allows eligible U.S. military installations, U.S. government agencies, and U.S. research institutions direct access to the HSDL without a login. Access is limited to the specified IPs or domain of that organization (e.g., a building or a campus). Please contact h SDL@nps.edu for further information regarding this type of access.

Access to the Restricted Collection

Access to the Restricted Collection is limited to U.S. government officials (at the local, state, tribal or federal level) and active members of the U.S. military. Users requesting access must have an individual HSDL account and be granted an additional level of authorization. To obtain this access, either login above with an existing account or begin by requesting an individual account. Once that account is confirmed, return and request access to the Restricted Collection.

Password
If you have forgotten your password, use the Forgot my password feature to send yourself an email containing instructions on how to reset it. This email will be sent to the email address that serves as your website login name. If you do not receive the email in a timely way, check your spam filter messages are easily filtered out.

Username/Login Name
Your username/login name is the email address you submitted to us when you signed up for the account. It is most likely your official email address, as we only accept personal, commercial accounts under certain circumstances. To manage your email addresses, login to your account profile on the NPS Center for Homeland Defense and Security (CHDS) website.

If you have problems or need to update your email address, contact techsupport@chds.us or call 831-272-2437.
Access to the Homeland Security Digital Library (HSDL)

The Homeland Security Digital Library (HSDL) is a program of the Naval Postgraduate School Center for Homeland Defense and Security (CHDS).

Individual Accounts

We invite all homeland security officials and academics to utilize the HSDL for research, analysis, and policy and strategy development. Full library access is offered to U.S. citizens who are:

- Federal, state, tribal, and local U.S. government officials
- Members of the U.S. military
- Homeland security researchers and academics
- Security staff protecting organizations vital to U.S. infrastructure

If you already have a website account at the NPS Center for Homeland Defense and Security, use it to login now. Otherwise, create a new HSDL account by following the links and instructions below. Once you have a registered account and have confirmed your request to participate, you will hear back from us by email within 1-2 business days (or you may qualify for immediate access).

When registering for an account, please use an official email address issued by your agency, organization, or institution. Personal, commercial accounts will not be accepted or will require additional scrutiny and verification. (Examples of official email addresses can be those ending in .gov, .mil, .edu, .org, etc. Email addresses ending in yahoo.com, gmail.com, hotmail.com, etc, are not considered official.)

Organization-wide Accounts

We invite U.S. government agencies (federal, military, tribal, state, or local), U.S. military installations, and U.S. academic or research institutions to apply for direct, organization-wide access to the HSDL without a login. Access is limited to the specified IP(s) or domain of that organization (e.g., a building or a campus). Please contact hsdlsupport@nps.edu for further information.

Access to the Homeland Security Digital Library is granted to local, tribal, state and federal U.S. government officials; members of the U.S. military; homeland security researchers; and corporate homeland security managers or contractors.

Active Shooter: How to Respond

This checklist provides guidance to individuals, including managers and employees, who may be caught in an active shooting event.
Defeating the Active Shooter: Applying Facility Upgrades in Order to Mitigate the Effects of Active Shooters in High Occupancy Facilities

From the thesis abstract: "The average duration of Active Shooter incidents in Institutions of Higher Education within the United States is 12.5 minutes. In contrast, the average response time of campus and local law enforcement to these incidents is 18 minutes. In the majority of Active Shooter incidents affecting U.S. IHEs [Institution of Higher Education], the emergency response time greatly exceeds the incident duration and affords law enforcement authorities no opportunity to interdict the shooter or prevent further casualties. This stark contrast between response requirements and response capability produces a considerable delta of dead, injured or potential victims and provides the unfortunate motivation for this project. The primary focus of this project is aimed at reducing the Rate of Kill of Active Shooters in U.S. IHEs. This thesis contains 14 case studies that examine lethal Active Shooter incidents that occurred in U.S. IHEs, as well as the Oslo and Utoya Island Active Shooter event that occurred in Norway. Data analysis on each of these incidents revealed facility composition as a critical vulnerability common to all of these incidents. Accordingly, the recommendations included in this thesis suggest a practical implementation of facility upgrades capable of mitigating the deadly effects of Active Shooters."

Active Shooter: Recommendations and Analysis for Risk Mitigation, 2012 Edition

The type of police response to an active shooter attack depends on the unique circumstances of the incident. In the event of such an attack, private security personnel should follow the instructions of the first-responders from the NYPD (New York Police Department). Because active shooter attacks are dynamic events, the NYPD cannot put forward a single set of best-practices for private security response to such incidents. However, the NYPD has compiled a list of recommendations for building security personnel to mitigate the risks from active shooter attacks. The recommendations draw on previous studies of active shooter attacks and are presented in Part II. The NYPD developed these recommendations based on a close analysis of active shooter incidents from 1988 to 2012. This Compendium of cases, presented in the Appendix, includes 324 active shooter incidents. It is organized chronologically by type of facility targeted, including office buildings, open commercial areas, factories and warehouses, schools, and other settings. The NYPD performed a statistical analysis on a subset of these cases to identify common characteristics among active shooter attacks. This analysis is presented in Part III and the underlying methodology is presented in Part IV. The analysis found a large degree of variation among attacks across some broad categories, including: sex of the attacker, age of the attacker, number of attackers, planning tactics, targets, number of casualties, location of the attack, weapons used, and attack resolution. The analysis also provides insight into the frequency of active shooter attacks.

What are the Basic Search options?

A Basic Search allows you to conduct a simple keyword or exact phrase search using the options described below.

Option: keyword search [default]

What it does: search for documents containing one or more words
When/how to use:

to search for resources with one or more keywords
multiple words can be combined with and or simply strung together
example: weapons and destruction and biological or weapons destruction biological

Example search for weapons of mass destruction as keywords:

```
SEARCH THE HSDL  Advanced Search  Help  Suggest Resources

weapons of mass destruction

term in any field  HSDL Collection (limited)  Search
```

Option: exact phrase search

What it does: search for documents containing an exact sentence or phrase
When/how to use:

to search for resources with a specific term or phrase
use quotes around your search term to search for an exact phrase.
"weapons of mass destruction" will return results where the complete phrase appears.
without quotes, it will return results where words in the search term appear in any order.

Example search for "weapons of mass destruction" as an exact phrase:

```
SEARCH THE HSDL  Advanced Search  Help  Suggest Resources

"weapons of mass destruction"

term in any field  HSDL Collection (limited)  Search
```
What are the Advanced Search options?

An Advanced Search allows you to retrieve more targeted results.

Option: all of the words (and)

What it does: search for resources where all of the words appear
When/how to use:
to search for a set of keywords that must appear in the resource, regardless of order

Example:

```
SEARCH THE HSDL
ALL OF THE WORDS
weapons of mass destruction
doctrine
SEARCH
```

Option: any of the words (or)

What it does: search for resources where any of the words appear
When/how to use:
to search for a set of key words that may appear in the resource
use this if there are acronyms, synonyms or spelling variations that would help with your search

Example:

```
SEARCH THE HSDL
ANY OF THE WORDS
weapons of mass destruction
biological, chemical, or radiological
doctrine
SEARCH
```
Executive Order on Improving Critical Infrastructure Cybersecurity

Submitted by smcortez on Wed, 02/13/2013 - 13:36

Yesterday, President Obama signed an Executive Order on Improving Critical Infrastructure Cybersecurity.

Yesterday, President Obama signed an Executive Order on Improving Critical Infrastructure Cybersecurity.

From the Executive Order: “Repeated cyber intrusions into critical infrastructure demonstrate the need for improved cybersecurity. The cyber threat to critical infrastructure continues to grow and represents one of the most serious national security challenges we must confront. The national and economic security of the United States depends on the reliable functioning of the Nation’s critical infrastructure in the face of such threats. It is the policy of the United States to enhance the security and resilience of the Nation’s critical infrastructure and to maintain a cyber environment that encourages efficiency, innovation, and economic prosperity while promoting safety, security, business confidentiality, privacy, and civil liberties.”

The Executive Order seeks to strengthen “the U.S. Government’s partnership with critical infrastructure owners and operators to address cyber threats” by:

- Establishing new information sharing programs to provide classified and unclassified threat information to U.S. companies
- Developing a Cybersecurity Framework, led by the National Institute of Standards and Technology (NIST)
- Maintaining strong privacy and civil liberties protections
- Identifying critical infrastructure at greatest risk
- Reviewing and improving existing cybersecurity regulation
- Creating a voluntary critical infrastructure cybersecurity program to support the adoption of the Cybersecurity Framework

Scientist Examine the Impact of Climate Change on U.S. National Security

Submitted by fgibson on Wed, 02/13/2013 - 12:27

A new report from Harvard University’s Center for the Environment titled “Climate Extremes: Recent Trends with Implications for National Security” identifies security risks from extreme weather and climate change.

The increasing number of extreme weather events such as floods, drought, heat waves, and severe storms spurs scientists to draw connection between increasing greenhouse gases and extreme weather. This new study was conducted to examine the potential impact extreme weather events will have on national security planning.

The authors of the report asked the following questions in regard to the coming decade:

- Would these anomalous climate extremes persist?
- To what extent are the extreme conditions a result of natural variability or greenhouse warming?
The librarians at the Homeland Security Digital Library created this custom search engine to help blog readers find postings on topics of interest in the growing community of Homeland Security bloggers.
Email your recommendations, documents, media or links to the HSDL team at hsderef@nps.edu (link will open your email client)

We rely on homeland security professionals and researchers across the country to assist in the collaborative effort to help define the discipline of homeland security and facilitate the sharing of essential policy, strategy, organization, and research information throughout the homeland security professional community.

Please recommend or send the following types of resources to the HSDL. All submissions are welcome. We greatly appreciate the cases where you can attach the actual document.

- State policy documents including draft copies
- Reports and evaluations
- Lessons learned or after action reports
- Best practices
- Links to websites
- Newsletters

All submissions are subject to review and the appropriate permissions will be obtained. HSDL team subject and state specialists are available upon request.
